Patient Authorization for Artificial Intelligence (AI) Scribe Use

Our practice may use OpenEvidence, a HIPAA-compliant, artificial intelligence (AI)-assisted documentation tool, during your visit. This technology helps your physician document your appointment accurately and efficiently while remaining focused on you and your care. With your permission, the tool may listen to and process conversations between you and your physician to help prepare clinical notes. OpenEvidence states that it does not use protected health information to train AI models. Your physician remains responsible for reviewing and approving the medical record.

There are risks linked to the use of AI, which include but are not limited to:

- **Language capabilities:** AI scribe technology right now works only with English-speaking patients. There may be some errors in translation for those with limited English skills.

- **Security safeguards:** If there is a breakdown in the tool's security safeguards, this could result in your health data being made available to other people.

You can choose to opt out:

You may choose not to have AI-assisted documentation used during your appointment. Choosing not to use this technology will not affect the quality of care you receive.

You may also change your decision at any time by notifying your healthcare provider or a member of our staff.

I confirm by signing below that:

I have been able to ask questions about the use of AI and all my questions have been answered.
